## Glossary:

Synthetic Gut: Basic, very playable with soft stringbed. High comfort.

Polyester: Extremely durable, low power and deadened stringbed, but with great access to spin. High control for players with big swings. Very popular among professional players.

Hybrid: Combination of two string types. With poly/syn gut combo, offers greater durability and spin while softening the feel and increasing comfort.

Gauge: Thickness of string. Thicker string (lower number) is more durable, thinner string (higher number) offers greater power, feel, and spin.

Tension: Higher tension offers greater control and spin, lower tension offers more power and comfort.
